

## LANDFIRE Events Data Dictionary

Fields highlighted in yellow are attributes we collect from the source data sets that are contributed.

Attribute	Description
Event_ID	LANDFIRE unique identifier for the disturbance or treatment event.
LF_ID	LANDFIRE unique identifier for the disturbance or treatment event within the original dataset.
DB_ID	Unique identifier for the disturbance or treatment event or polygon within the source dataset, if available.
DB_Source	Name of data layer/field in source dataset where the DB_ID information can be found, if available.
Event_Type	<p>Type of disturbance or treatment event represented by the polygon. LANDFIRE assigns one of the following terms to each event:</p> <p><b><u>Development</u></b> - conversion of natural lands into housing, commercial, or industrial building sites. Involves permanent land clearing.</p> <p><b><u>Clearcut</u></b> - the cutting of essentially all trees, producing a fully exposed microclimate for the development of a new age class.</p> <p><b><u>Harvest</u></b> - a general term for the cutting, felling, and gathering of forest timber. The term harvest was assigned to events where there was not enough information available to call them one of the 2 distinct types, clearcut or thinning.</p> <p><b><u>Thinning</u></b> - a tree removal practice that reduces tree density and competition between trees in a stand. Thinning concentrates growth on fewer, high-quality trees, provides periodic income, and generally enhances tree vigor.</p> <p><b><u>Mastication</u></b> - means by which vegetation is mechanically “mowed” or “chipped” into small pieces and changed from a vertical to horizontal arrangement.</p> <p><b><u>Other Mechanical</u></b> - catch all term for a variety of forest and rangeland mechanical activities related to fuels reduction and site preparation including; piling of fuels, chaining, lop and scatter, thinning of fuels, Dixie harrow, etc.</p> <p><b><u>Wildfire</u></b> - an unplanned, unwanted wildland fire including unauthorized human-caused fires, escaped wildland fire use events, escaped prescribed fire projects, and all other wildland fires where the objective is to suppress or put out the fire.</p> <p><b><u>Wildland Fire Use</u></b> - the application of the appropriate management response to naturally-ignited wildland fires to accomplish specific resource management objectives in pre-defined designated areas outlined in Fire Management Plans.</p> <p><b><u>Prescribed Fire</u></b> - any fire ignited by management actions to meet specific objectives. A written, approved prescribed fire plan must exist, and NEPA requirements (where applicable) must be met, prior to ignition.</p> <p><b><u>Wildland Fire</u></b> - a catch all term used to describe any non-structure fire that occurs in the wildland. Three distinct types of wildland fire have been defined: wildfire, wildland fire use, and prescribed fire. The term wildland fire was assigned to events where there was not enough information available to call them one of the 3 distinct types.</p>

Attribute	Description
Event_Type (cont.)	<p><b><u>Weather</u></b> - a weather related event that results in loss of vegetation such as blowdown, hurricane, or tornado.</p> <p><b><u>Insecticide</u></b> - application of a chemical substance used to kill insects.</p> <p><b><u>Chemical</u></b> - application of a chemical substance. The term chemical was assigned to events where there was not enough information available to call them one of the 2 distinct types, herbicide or insecticide.</p> <p><b><u>Insects</u></b> - infestations of unwanted insects that can affect vegetative health such as bark beetle.</p> <p><b><u>Disease</u></b> - infestations of disease that can affect vegetative health such as root rot.</p> <p><b><u>Insects/Disease</u></b> - infestations of insects and/or disease that can affect vegetative health. This term was assigned to events where there was not enough information available to call them one way or the other.</p> <p><b><u>Herbicide</u></b> - application of a chemical substance used to kill or inhibit the growth of plants.</p> <p><b><u>Biological</u></b> - the use of living organisms, such as predators, parasites, and pathogens, to control weeds, pest insects, or diseases.</p> <p><b><u>Planting</u></b> - reestablishing a vegetative community by planting.</p> <p><b><u>Reforestation</u></b> reestablishing a vegetative community by planting or seeding.</p> <p><b><u>Seeding</u></b> - reestablishing a vegetative community by seeding.</p>
Event_Subtype <b>Required</b>	Type of disturbance or treatment assigned to the event in source dataset.
Event_Name	Name or title of disturbance or treatment assigned to the event in source dataset.
Year	Year (YYYY) in which the disturbance or treatment occurred.
Start_Date	Date (MMDDYY) on which the disturbance or treatment event began.
End_Date	Date (MMDDYY) on which the disturbance or treatment event ended.
Severity	<p>Severity of disturbance or treatment event, in terms of biomass reduction. One of the following terms was used to indicate the effects of the event on the above-ground vegetation within a polygon:</p> <p>Low = &lt;20% above-ground biomass removed  Moderate = 20-80% above-ground biomass removed  High = &gt;80% above-ground biomass removed</p>
Agency	Reporting agency (or non-governmental organization) for disturbance or treatment event.
Source_Code	LANDFIRE internal source code assigned to each data source. For more information on data sources consult the table "lutSource_Code" found at <a href="http://www.landfire.gov/publicevents.php">http://www.landfire.gov/publicevents.php</a> .
Comments	Supplemental information about the disturbance or treatment event pulled from the source dataset. Such as effects of disturbance/treatment on vegetation or fuels.
FiscalYear <b>Required</b>	Fiscal year (YYYY) in which the event occurred. Fiscal year is from October 1st through September 30th. This is a new attribute added in 2021 when LANDFIRE started processing Event data by fiscal year.
