

LANDFIRE Forest Canopy Base Height Attribute Data Dictionary

Attribute	Description
VALUE	Forest Canopy Base Height (CBH) describes the lowest point in a stand where there is sufficient available fuel (=> 0.25 in dia.) to propagate fire vertically through the canopy. Specifically, CBH is defined as the lowest point at which the canopy bulk density is >= 0.012 kg m-3.
-9999	Fill - NoData
0	All non - forest values, including herbaceous and most shrub systems and non-burnable types such as urban, barren, snow and ice, and agriculture.
1 - 99	0 - 9.9 meters
100	values >= 10 meters and some stands dominated by broadleaf species
METERSX10	Display attribute, CBH is m*10
METERS	Meters.
R	Red color value/255
G	Green color value/255
B	Blue color value/255
RED	Red color value.
GREEN	Green color value.
BLUE	Blue color value.
