

LANDFIRE data alert

Data Alert: Important Disturbance Severity Information Impacting LF 2024

Users should be aware of errors affecting Disturbance Severity in the Southeast US for LF 2024. Specifically, disturbances labeled as “Weather” (i.e. hurricane-damage disturbances) were incorrectly labeled as “No Severity” for areas indicated in blue on the map below.

Additionally, submitted weather polygons relying on coarse 2km reporting grids were removed (red areas, below) as they did not align with LANDFIRE's level of detail for hurricane-based disturbances. Because disturbance severity directly influences vegetation and fuel datasets, LANDFIRE will re-release corrected LF 2024 products to LANDFIRE.gov on January 28th, 2026. Corrected products will release to the LF Map Viewer, LFPS, and Image Services in February/Early March.
