

Using WMS Data in ArcGIS Online

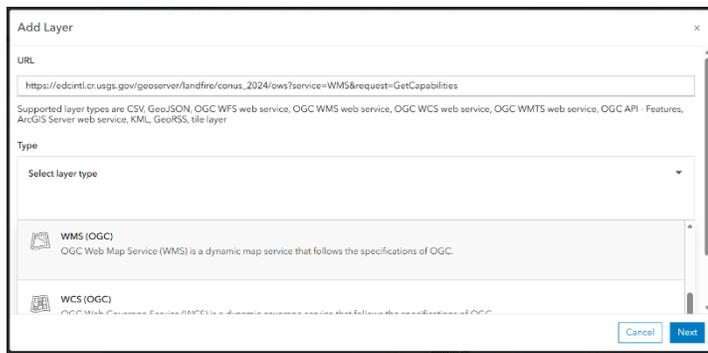

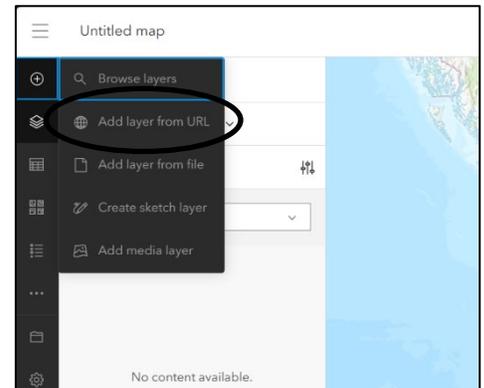

There are several ways to get LANDFIRE data into ArcGIS Online (AGOL)

1. Go to the LANDFIRE website and get the [WMS URL](#) for the data product you wish to work with
2. Access the most current LANDFIRE data products already posted on the [USGS LANDFIRE AGOL Landing Page](#)
 - o *Note that all active LANDFIRE versions on the WCS/WMS page should match the active products published on the LANDFIRE Landing Page within AGOL Screen capture of the top toolbar in AGOL showing the user to select the word Map*

Bringing in LANDFIRE Products to AGOL through WMS

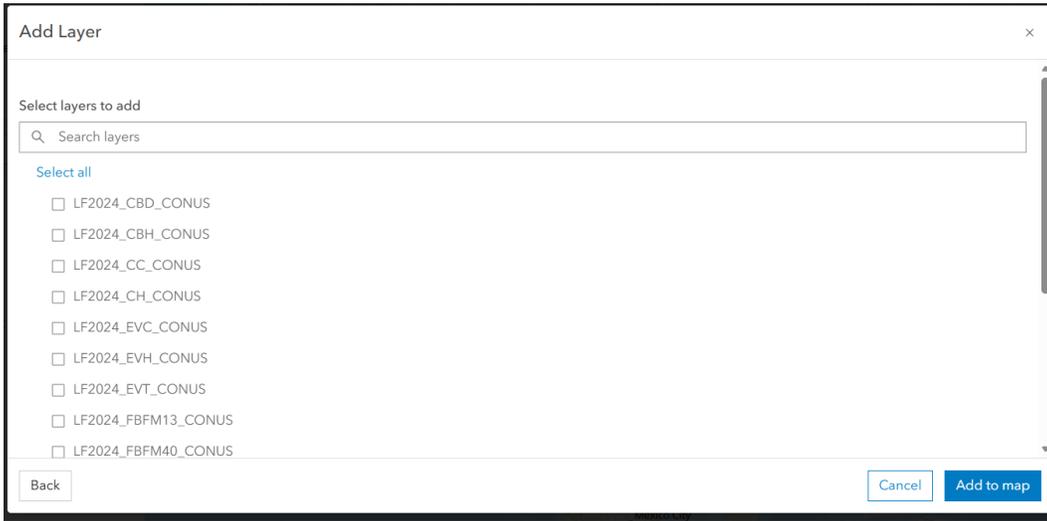

1. Click on **Map** from the top menu once you are signed into AGOL
2. Get a **WMS URL** from the LANDFIRE site:
 - a. Go to https://landfire.gov/data/lf_wcs_wms
 - b. Select which **WMS layer** you would like to add to your ArcGIS base map.
 - i. *WCS layers do not work in AGOL*
 - c. **Copy the link** of the product you wish to bring into AGOL

3. Click on **Add** from left hand tool bar
4. Click on **Add Layer from URL**
5. Enter the **WMS URL** into the URL text box and **select WMS (OGC)** from the layer type dropdown and select next

6. Select the layer(s) you want to view on the map

7. Click **Add to map**

8. You should now see your map display the selected layer and you can view the metadata, legend, and other helpful documentation in the left toolbar
