Attribute	Description
Value	These fire behavior fuel models represent distinct distributions of fuel loadings found among surface fuel components (live and dead), size classes and fuel types. The fuel models are described by the most common fire carrying fuel type (grass, brush, timber litter or slash), loading and surface area-to-volume rati by size class and component, fuelbed depth and moisture of extinction. Further detail can be found in Scotland Burgan (2005) and Rothermel (1983).
